PROFILE

Engineering student (ESIEA, 5th year, Data and AI major) on a double degree with the MSc AI for Business Transformation (SKEMA), working where AI engineering meets business needs. I am looking for a 6-month final-year internship in AI / Data to build models that are useful, from scoping to deployment.

EXPERIENCE

Data Scientist & Computer Vision Intern – TechElevate April – August 2026

Morocco · sheep and goat identification

In Morocco, 450 field agents identify sheep and goats by the 8-digit number on their ear tag, often with no network. **My mission:** let them read that number with the phone camera, even offline.

- **Preparing the data:** PostgreSQL pipeline (2.7M records) → Azure Blob Storage → mobile app.
- **Making the reading reliable:** fine-tuned TrOCR (PyTorch) on the 8 digits, no more letter/digit mix-ups.
- **Fitting in the agent's pocket:** 30 MB ONNX model deployed via Azure, offline reading in under one second.
- **Shipping a safe tool:** fixed a privacy flaw in a library, unified the 9 metric calculations.

Result: the tool is in production with the 450 field agents.

AI AND DATA PROJECTS

LendSmart: which loans should we fund? ESIEA project · team of 2 · 2026

The challenge: help a fund pick its loans, knowing a default costs it 2.3 times more than a good loan turned down.

- **Avoiding the data leakage trap:** removed 11 columns only known after funding, on 35,918 Lending Club loans.
- **Predicting default risk:** logistic regression (TF-IDF) + LightGBM + CatBoost, time-based validation (AUC 0.716).
- **Turning the score into a decision:** threshold checked on an unseen quarter; a grades A-B rule loses 59% of profit.
- **Checking fairness:** dropped zip code, compared rejection rates across home ownership groups.

Result: 2nd on the Kaggle public leaderboard at submission (AUC 0.710), recommended threshold around 50% risk.

Autonomous piezoelectric street light CAP 4A project · team of 5 · 2025

The challenge: cut a city council's street lighting bill with a green energy source.

- **Designing the electronics:** 20 sensors and ESP32 firmware (C/Arduino), technical support to the team.
- **Steering by the data:** web platform (Node.js, MySQL), lighting thresholds tuned from the collected readings.

EDUCATION

MSc AI for Business Transformation – SKEMA Business School × ESIEA 2026 – 2027

Engineering degree in Computer Science – ESIEA Paris 2021 – 2027

Data and AI major

SKILLS

Programming	Python, SQL, R, C, JavaScript / TypeScript
Data and AI	PyTorch, scikit-learn, Hugging Face (TrOCR), ONNX, OpenCV, pandas, NumPy, Matplotlib
Cloud & deployment	Azure (Blob Storage), Google Cloud Platform, Docker
Databases and web	PostgreSQL, MySQL, REST APIs with Node.js / Express, React Native
Tools	Git / GitHub, Jupyter
Methods	Business requirements scoping, Agile (AgilePM v3 Foundation certified)
Languages	French (C1), English (C1, TOEIC 915)

VOLUNTEERING

Vice-President – Huma'Népal 2021 – 2023

ESIEA Personal Development Project · **winner of the 2022 Trophées du Bénévolat Associatif**

- **Non-profit leadership:** brought IT equipment to schools in Nepal and organised French-Nepalese exchanges.
